Introduction

- People emphasize their health and strengthen it by exercising at the gym, in the park, or even at home.
- We aim to establish a website to help them check whether their **healthy** is normal.
- Given their **age, gender, height, weight, eating habits, activity level, goal, daily calories** and **after days**.
- Displays result with suggestions and amounts of each nutrient in a histogram.

Outline

- Conclusion

Tools for develop model

- Programming Language via CSS, HTML, JavaScript and Python.
- Data transmitting via Flask.
- Aesthetic via JavaScript.

- Conclusion

Results

Our anticipate

- Accurately calculate the actual results using BMR, TDEE, and so on.
- Provide a histogram to show the amounts of each nutrient.

Our website anticipate

- Suggestion.
- A histogram displays each nutrient.

Results (Continued)

Analysis Results

Parameter	Value
Actual Weight	63.58 kg
TDEE	1922.32 kcal

Suggestion: You have a normal weight. Keep up your current diet and exercise habits.

Figure I. Results of entering data.

Results (Continued)

Sedentary	Light	Moderate	Active	Very active
1.2	1.375	1.55	1.725	1.9

Table I. Consume calories from the exercise.

Vegetarian	Meat	Lacto ovo vegetarian	Balanced
1800	2500	2200	2000

Table II. Consume calories from the daily diet.

Results (Continued)

$$\begin{aligned}\text{Male's BMR} = & (9.99 \times \text{weight}) + (6.25 \times \text{height}) \\ & - (4.92 \times \text{age}) + (166 \times \text{gender} - 161)\end{aligned}$$

$$\begin{aligned}\text{Female's BMR} = & (9.99 \times \text{weight}) + (6.25 \times \text{height}) \\ & - (4.92 \times \text{age}) + (166 \times \text{gender} - 161)\end{aligned}$$

Results (Continued)

$$\text{Each day} = \text{BMR} \times \text{Activity}$$

$$\text{Calorie deficit} = \text{Intake} - \text{Calories per day}$$

$$\text{Weight changes} = \frac{\text{Calorie deficit}}{7700}$$

$$\text{Actual weight} = \text{Weight} + \text{Weight changes} \times \text{After days}$$

$$\text{BMI} = \frac{\text{Actual Weight}}{\text{Height}^2}$$

Conclusion

- Using precise tools to calculate the actual weight, ensuring that users receive accurate and reliable measurements for better health management.

Conclusion

- Using precise tools to calculate the actual weight, ensuring that users receive accurate and reliable measurements for better health management.
- Providing accurate options for computation, allowing users to input various parameters and receive tailored recommendations based on their unique needs.

Conclusion

- Using precise tools to calculate the actual weight, ensuring that users receive accurate and reliable measurements for better health management.
- Providing accurate options for computation, allowing users to input various parameters and receive tailored recommendations based on their unique needs.
- We learned fundamental front-end and back-end development, including figure display using JavaScript and Python, to develop an application that seamlessly integrates user data and visualizes results effectively.
