# Introduction

- People emphasize their health and strengthen it by exercising at the gym, in the park, or even at home.
- We aim to establish a website to help them check whether their **healthy** is normal.
- Given their **age, gender, height, weight, eating habits, activity level, goal, daily calories** and **After days**.
- Displays result with suggestions and amounts of each nutrient in histogram.

# Outline

- Conclusion

# Results

## Our anticipate

- Accurately calculate the actual weight using a series of indexes, such as BMR, TDEE.
- Provide a histogram to show the amounts of each nutrient.

## Our model anticipate

- Provide suggestion, different histograms for each nutrient.

# Results (Continued)

**Suggestion: You are underweight. Consider increasing your calorie intake and doing strength training.**

Figure I. Results of entering data.

## Results (Continued)

<b>Sedentary</b>	<b>Light</b>	<b>Moderate</b>	<b>Active</b>	<b>Very active</b>
1.2	1.375	1.55	1.725	1.9

Table I. Consume calories from the exercise.

<b>Vegetarian</b>	<b>Meat</b>	<b>Lacto ovo vegetarian</b>	<b>Balanced</b>
1800	2500	2200	2000

Table II. Consume calories from the daily diet.

## Results (Continued)

$$\begin{aligned}\text{Male's BMR} = & (9.99 \times \text{weight}) + (6.25 \times \text{height}) \\ & - (4.92 \times \text{age}) + (166 \times \text{gender} - 161)\end{aligned}$$

$$\begin{aligned}\text{Female's BMR} = & (9.99 \times \text{weight}) + (6.25 \times \text{height}) \\ & - (4.92 \times \text{age}) + (166 \times \text{gender} - 161)\end{aligned}$$

## Results (Continued)

$$\text{Each day} = \text{BMR} \times \text{Activity}$$

$$\text{Intake} = \text{Daily diet type}$$

$$\text{Calorie deficit} = \text{Intake} - \text{Calories per day}$$

$$\text{Weight changes} = \frac{\text{Calorie deficit}}{7700}$$

$$\text{Actual weight} = \text{Weight} + \text{Weight changes} \times \text{After days}$$

$$\text{BMI} = \frac{\text{Weight}}{\text{Height}^2}$$

- Conclusion

# Conclusion

- Using precise tools to calculate the actual weight, ensuring that users receive accurate and reliable measurements for better health management.
- Providing accurate options for computation, allowing users to input various parameters and receive tailored recommendations based on their unique needs.
- We learned fundamental front-end and back-end development, including figure display using JavaScript and Python, to develop an application that seamlessly integrates user data and visualizes results effectively.
